--	--

INSTRUCTIONS: To create a logic model for a program or project, first enter the name of the program or project in the blank on the first line of the logic model worksheet. Using the File, Save As commands in Word, save the logic model worksheet as a new file. Rename the new file with a name that reflects the name of your project/program. To complete the logic model, place the cursor within each of the boxes of the logic model worksheet (i.e., SITUATION, PRIORITIES, INPUTS, OUTPUTS, OUTCOMES, ASSUMPTIONS AND EXTERNAL FACTORS) and enter the appropriate information about your program/project in each box. If the information you enter causes the worksheet to exceed one page in length, the logic model will automatically wrap over onto the next sheet.
